

Research Studies

Stent Trials

DAPT A study to assess the safety and effectiveness of 12 versus 30 months of dual antiplatelet therapy in subjects undergoing percutaneous coronary intervention with either a drug-eluting stent or a bare metal stent for the treatment of coronary artery lesions.

Acute Coronary Syndrome

SOLID TIMI 52 Study of a new drug to treat patients after an acute coronary syndrome.

Anticoagulation / Anti-Thrombin Drug Trials

ENGAGE AF A research study comparing an investigational blood thinner to warfarin in patients with an irregular heartbeat.

Hyperlipidemia Drug Trials

IMPROVE IT Comparison of two different cholesterol lowering regimens for patients that have been hospitalized with a heart attack.

Pacer / ICD / Lead Device Trials

ACUITY Spiral Lead Longitudinal Surveillance Registry of the Acuity™ Spiral Lead

APPROPRIATE Study to determine whether an improvement in peak VO₂ is greater using the minute ventilation (MV) sensor compared to accelerometer (XL) in chronotropically incompetent patients

HEART Study to investigate using multiple sensors to detect hemodynamic stability.
